

CCT Estate Executive Summary

CCT inc. - a Counterfeit Combat Technology developer – a US registered company. We create innovative lean IT solutions to protect Real Estate Documents, Land Registry and ownership Certificates against forgery and counterfeit through effective and simple Authentication and Verification processes.

Errors or malicious activities can cause the same property to be sold to multiple buyers causing lots of legal cases and financial losses. CCT Estate solution for Title Deed with AC-QR coding prevents all that and gives great trust and assurance for all parties especially real-estate investors, saving the court system time and efforts, giving inspectors a verifiable compliance to issued license and creating trust in the society. CCT provides a viable solution at a global scale.

CCT inc. introduces a combination of patent technologies & applications to eliminate forgery, reduce financial losses, make authentication and verification processes online and real-time with complete traceability and tractability functions.

CCT produces 100% authenticity guarantee, fraud protection, real time verification and full confidentiality protection.

CCT-Estate:

The system consists of smart phone iVerify-Tabu app., front end portal for control, trace and track functions, and secure backend, which allows a real-time and online verification of the authenticity of ACQR coded document as well as the traceability of the transactions.

CCT Estate Mission:

Enabling Real-Estate Institutions to protect their certificates against counterfeit activities by introducing a highly authenticated, secured, traceable and monitorable Smart Certificates that are easily and securely verified from anywhere worldwide with instant results, saving time, efforts and cost with 100% fraud detection system.

The Technology:

CCT system uses the most advanced coding system such as AC-QR codes, Block-chain technology, RFID, and cloud computing to secure its documents and enable instant verification process with 100% effectiveness from anywhere worldwide. CCT allows for Traceability, Tractability and Control by the issuing institute using a user friendly portal.

Types of Counterfeit detection:

CCT-Estate solution allows for the detection of fixed Non-Variable forgery such as organization's name, address, signature, file #, stamp etc.

It also allows for the detection of Dynamic Variable forgery such as the new buyer/buyers information, new data, the payment amount etc.

CCT solution is capable of detecting forgery and counterfeit even in the case of altering the physical data on the document and the electronic data on the storage server simultaneously. Our system discovers and detects forgery made simultaneously to the document and to the data stored.

What does CCT Estate do?

- Document/Product preservation, Counterfeit and Forgery detection
- Trusted and inimitable...100% protection
- Verification and Authentication is simple, virtual and real-time
- Document Updatability
- Statistical Data Analysis
- Full Archiving system and ease of retrieval capabilities
- Improving document credibility to the highest level
- Decreasing operational costs and improving sustainability
- Improving Turn Around Time of activities
- Enhancing national economy by protecting documents & simplifying verification
- Building high level of trustworthiness within Real-Estate industry
- Counterfeit Free Society

Services:

- Authentication System
- Verification System – iVerify-Tapu
- Traceability
- Serialization system
- Archiving System
- Cash flow control
